

CARPET CLEANING WITH A CONSCIENCE.

Dry-extraction carpet cleaning, also known as encapsulation carpet cleaning, is an environmentally conscious cleaning system that works by applying an encapsulating chemical to the carpet's surface. The encapsulating cleaning solution attaches to the carpet's soil embedded deep within the carpet's fibers. The carpet is then agitated using a counter-rotating brush machine (CRB) that suspends the embedded soil to the

carpet's surface, followed by thorough vacuuming using a HEPA filter vacuum.

THE BENEFITS – LESS IS MORE

- Consumes considerably less water than standard hot-water extraction or “steam cleaning” and is better for the environment.
- Prevents shrinkage and the likelihood of carpet wicking and mildewing.
- Improves carpet appearance and life expectancy when incorporated into a carpet maintenance program.

RESILIENT CLEANING SOLUTIONS.

VCT

Besides daily dust and damp mopping to remove everyday soil, D9 cleans and refinishes VCT flooring as part of a facility's regular maintenance program to avoid costly future stripping and refinishing.

LVT / MARMOLEUM / RUBBER

While durable and highly resistant to traffic wear, daily dust and damp mopping are not enough to lift deeply embedded soil. An auto-scrubbing maintenance program rejuvenates your floor's appearance. D9 can help you determine a suitable maintenance schedule based on floor type and use.

ESD / SDT

To maintain dissipative performance, ESD/SDT surfaces should be cleaned regularly to prevent improper static dissipation. D9 has the knowledge and experience to maintain ESD/SDT flooring using each manufacturer's care guidelines.

CONCRETE

Proper cleaning and sealing of concrete floors can provide long lasting resistance to water, stains, and surface abrasion. D9 uses a variety of sealants and restorative techniques to solve a variety of concrete flooring issues.

You're not a customer, you're a partner. We take the time to understand your needs. Let's tackle the issues together then allow us to step up and accept the challenge.

As experts, we never stop learning. We educate our team and stay on top of trends and technology that extend the life of your facility.

Practicing sustainability, one facility at a time. Environmental consciousness isn't enough. It takes a well-trained team to elevate the tools, equipment, and water conservatory mindset.
